2.C   CODE TABLES

The Code Tables chapter contains the code tables originally documented in individual chapters of the HL7 Version 2 Standard. In HL7 Version 2.7, a proposal was accepted to move all of the tables to a common document. This separation will allow these artifacts, which are often subject to more frequent change to meet regulatory requirements, to be ballotable on a more responsive schedule than the rest of the standard. The meta-data tables for each table will support harmonization with HL7 Version 3 and Clinical Document Architecture.

> **Note:** The Vocabulary T.C. is the steward of this section.

2.C.1   DEFINITIONS:

As of v2.7, there will be a migration toward terminology used in Version 3. Version 3 defines Code System and Value Set as follows:

Code System

A Code System is defined as a collection of codes with associated designations, meanings and associations. The persistent representation of a Code System includes meta-data about the code system itself, as well as the contents of the Code System.

Examples of Code Systems include ICD-9 CM, SNOMED CT, LOINC, and CPT. To meet the requirements of a Code System as defined by HL7, a given Concept Code must resolve to one and only one meaning within the Code System. Given this definition, each table in the HL7 Version 2 standard represents a different Code System since Concept Codes are sometimes used in different tables to have different meanings. For example, the Concept Code "M" in the gender Code System means "Male", while "M" in the marital status Code System means "Married".[p.60]

Value Set

A Value Set represents a uniquely identifiable set of valid concept representations, where any concept representation can be tested to determine whether or not it is a member of the value set.

Value set complexity may range from a simple flat list of concept codes drawn from a single code system, to an unbounded hierarchical set of possibly post-coordinated expressions drawn from multiple code systems.

Value sets exist to constrain the content for a coded element in an HL7 static model or data type property. Value sets cannot have null content, and must contain at least one concept representation where any given concept is generally (but not required to be) represented by only a single code within the Value Set.

HL7 defines four table types, reflecting content ownership: HL7 defined, User-defined, Imported and Externally defined. Local implementation may further constrain these table types.

2.C.1.1   User-defined Tables

A user-defined table is a set of values that are locally or site defined. This accommodates certain fields, like PV1-3 - Assigned Patient Location, which will have values that vary from institution to institution. Even though these tables are not defined in the Standard, they are given a user-defined table number to facilitate implementations. HL7 sometimes publishes suggested values that a site may use as a starter set (e.g., *Table 0001- Sex*). The CWE data type is often used to encode values for these tables. Note that some of these tables (e.g., *Table 0302 - Point of Care*) may reference common master files.

There are some user-defined tables that contain values that might be standardized across institutions but for which no applicable official standard exists. For these a set of **suggested** values may be listed in Appendix A. These suggested values appear in the text in a standard box format (e.g., *HL7 Table 0062 - Event Reason*

in Section 3.4.1.4, "Event reason code"). It is recommended that these values be used where applicable within an institution and serve as a basis for extensions as required. These values may, however, be redefined locally. The appropriate functional committee within HL7 solicits suggestions for additional values from institutions that are applying the Standard.

2.C.1.2   HL7 Tables

An HL7 table is a set of values defined and published by HL7. They are a part of the HL7 Standard because they affect the interpretation of the messages that contain them. These values may not be redefined locally; however, the table itself may be extended to accommodate locally defined values. This is particularly applicable in the case of *HL7 Table 0003 – Event Type*. The ID data type is most often used to encode values for HL7 tables. The values are listed in Appendix A. These HL7 tables also appear in the text in a standard box format (e.g., *HL7 Table 0003 – Event Type*).

HL7 tables can be thought of as universally used tables. This begins to bring this structure in line with v3 terminology.

2.C.1.3   External Tables

As of v2.7, external tables should use the acronym (e.g. UCUM or CVX) that has an explicit table 0396 entry and the table number (implicit 0396 entry in the form of HL7nnnn) will be retired.

External tables may be either "Referenced" or "Imported".

An External table is a set of coded values defined and published by another standards organization. External tables are used to populate fields like FT1-19-Diagnosis Code - FT1. Another example is the encoding of clinical observations using LOINC codes. The CF, CNE and CWE data type are used to represent values for these fields.

External tables arise from applications where the concepts and possibly the codes are established by external agencies due to regulatory requirements or agreements between HL7 and other Standards Developing Organizations..

2.C.1.3.1   Referenced Tables

A referenced table is a set of coded values defined and published by another standards organization. Referenced tables are used to populate fields like FT1-19-Diagnosis Code - FT1. Another example is the encoding of clinical observations using LOINC codes. The CF, CNE and CWE data type are used to represent values for these fields.

The content of a referenced table is not included in the HL7 Standard. The user will need to access the official source.

The data type for the field will be CWE if 1) other tables are allowed in the field **or** 2) the external table may be locally extended **or** 3) when the code may be replaced by local text.

The data type for the field will be CNE if 1) no other table is allowed in the field **and** 2) the external table may **not** be locally extended **and** 3) text may not replace the code. A CNE field must have an HL7 defined or external table associated with it. A CNE field may be context sensitive such that a choice of explicit coding systems or value sets might be designated.

2.C.1.3.2   Imported Tables

An Imported table is a set of coded values defined and published by another standards organization. Imported tables are published by HL7 on behalf of other organizations. Their contents are not subject to approval by HL7 ballot. Such tables will be published with HL7 Standards. However, they may be updated more frequently than HL7 Standards.

Imported tables differ from External tables in that they have been imported into the HL7 standard subject to specific license or copyright requirements of the supplier/author. HL7 users will need to abide by the licensing and copyright requirements of the source when applicable.

Imported Table 0834 – Mime Types is an example of an imported table.

The data type rules apply as defined for the imported table.

2.C.1.4 Local Tables

A local table is a table with a non-HL7 assigned table identifier and which contains a set of locally or site defined values. It may be locally assigned to local fields in Z segments or to HL7 fields having a CWE data type.

2.C.1.5 CWE Examples

2.C.1.5.1 ICD Examples

A simple example for code is the ICD-9 code for headache, which is "784.0".

```
|784.0^Headache^I9^^^^^general headache^^^^^2.16.840.1.113883.6.42|
```

A possible ICD-10 equivalent is "G44.1" (the ICD-10 classifications are slightly different).

```
|G44.1^Headache^I10^^^^^general headache^^^^^2.16.840.1.113883.6.3|
```

2.C.1.5.2 Coding Failure Examples

A common situation with CWE is when the actual concept cannot be properly represented in a particular coding system. Usually this circumstance arises where the concept is expected to be represented in a particular coding system. For the purposes of these examples, we assume that all these examples are for an observation value of type CWE that is bound to the full Snomed-CT valueset (Example OID for the value set = 2.16.840.1.113883.19.11.1 as published 11-June 2007, Real OID for the SNOMED-CT code system = 2.16.840.1.113883.6.96). *Important Note: The OID root 2.16.840.1.113883.19 is an HL7 OID used for example-only OIDs and OIDs in this space are never valid in real instances. The OIDs used in these examples that in the OID space 2.16.840.1.113883.6, 2.16.840.1.113883.5 and 2.16.840.1.113883.11 are the correct OIDs for use in production instances.*

The simplest case is where the CWE is not represented in the instance at all, or simply represented as no information.

```
|U^^HL70353|
```

However this is not a very useful representation - frequently the source system knows more information, and it is still useful to convey that information to the destination system, while still labeling the coding as incomplete.

```
|^^SCT^^^^^^^^^^2.16.840.1.113883.6.96|
```

or it may be encoded as

```
|^^SCT^^^^^^^^^^2.16.840.1.113883.19.11.1^20070711|
```

Both examples say that the concept cannot be coded in SNOMED. Even more useful is to convey some specific information about the concept, even though it cannot be represented in SNOMED:

```
|^^SCT^^^^^Burnt ear with iron. Burnt other ear calling for
ambulance^^^^^2.16.840.1.113883.6.96|
```

It is also possible that the content was first encoded in some other code system than SNOMED, and the source system was unable to encode the value in SNOMED.

```
|burn^^L96^^^^^Burnt ear with iron. Burnt other ear calling for
ambulance^^^^^2.16.840.1.113883.19.5.2|
```

In this case, because the type is CWE, local extensions are allowed, and the source system can simply use its own codeSystem (here identified by the OID "2.16.840.1.113883.19.5.2", which is an example OID) to

extend the other code system. In fact, the source system can also use a code from another well known code system, such as ICD-9. If ICD-9 had a code "A10.1" which stood for this same concept, then this would be valid:

```
|A10.1^^I9^^^^^^Burnt ear with iron. Burnt other ear calling for
ambulance^^^^^2.16.840.1.113883.6.42|
```

All these examples have assumed that the attribute is bound to the fictitious value set 2.16.840.1.113883.19.11.1 which is all of SNOMED-CT. If the value set was extended to include the LOINC codes as well, it would no longer be appropriate to encode a failure to code like this:

```
|^^SCT^^^^^^^^^^2.16.840.1.113883.6.96|
```

Since it is not true that the concept could not be coded from SNOMED-CT - it could not be coded in either SNOMED-CT or LOINC. For this reason, it is appropriate to encode the failure to code in the valueSet form:

```
|^^SCT^^^^^^^^^^2.16.840.1.113883.19.11.1^20070711
```

2.C.1.5.3   Expression examples

Expressions generally arise with complex medical terminologies such as SNOMED. For example, SNOMED CT defines a concept "cellulitis (disorder)" (128045006) an attribute "finding site" (363698007) and another concept "foot structure (body structure)" (56459004). SNOMED CT allows these codes to be combined in a code phrase:

```
128045006:{363698007=56459004}
```

The full CWE form for this is:

```
|128045006:{363698007=56459004}^^SCT^^^^^Cellulitis of the
foot^^^^^2.16.840.1.113883.6.42|
```

The SNOMED compositional expression language is currently undergoing comment, and may be found on the IHTSDO website (http://www.ihtsdo.org/fileadmin/user_upload/Docs_01/Technical_Docs/abstract_models_and_representational_forms.pdf). The next two examples are based on SNOMED CT Core Edition 2007-01-31.

This first example is the SNOMED code for "fracture of left tibia". It shows issues associated with grouping and nesting.

```
31978002|fracture of tibia|: 272741003|laterality|=7771000|left|
```

Strictly speaking (in normal form) a "fracture of left tibia" is not a "left fracture" of a "tibia bone" but is a "fracture" of the "left" "tibia bone" (that is, the qualification of "left" applies to the bone not to the fracture). Also note in this example that the fracture and bone are grouped - this may look irrelevant but is potentially significant for combined fractures where different morphology may apply to different bones. An alternative rendering for this same concept is:

```
64572001|disease|:{116676008|associated morphology|=72704001|fracture|,
  363698007|finding site|=(12611008|bone structure of
    tibia|:272741003|laterality|=7771000|left|)}
```

The second example shows a more complicated grouping and nesting structure. The SNOMED CT expression for "past history of fracture of left tibia" includes nesting even in it's simplest form because the laterality does not apply to the past history but rather to the disorder.

Final Standard.

```
417662000|past history of clinical finding|:246090004|associated finding|=
     (31978002|fracture of tibia|: 272741003|laterality|=7771000|left|)
```

The alternative rendering is even more nested:

```
243796009|situation with explicit context|:246090004|associated finding|=
   (64572001|disease|:{116676008|associated morphology|=72704001|fracture|,
   363698007|finding site|=(12611008|bone structure of tibia|:
   272741003|laterality|=7771000|left|)}),408729009|finding context|=
   410515003|known present|,408731000|temporal context|=410513005|past|,
   408732007|subject relationship context|=410604004|subject of record|
```

These are provided as examples of SNOMED expression syntaxes. A full discussion the merits of the different forms, their relationship and how to work with them can be found in the SNOMED compositional expression language definition referred to above.

It is important to note that the expression syntax and semantic rules are specified by the code system. For instance, in SNOMED CT, there are a defined set of qualifying attributes, and only Findings and Disorders can be qualified with the "finding site" attribute. CWE does not provide for normalization of compositional expressions; therefore, it is possible to create ambiguous expressions. Users should understand that they must provide the additional constraints necessary to assure unambiguous data representation, if they are planning to create compositional expressions using CWE. Otherwise, they risk the inability to retrieve a complete set of all records corresponding to any given query.

ICD-10 allows dual coding. Refer to Section 3.1.3 of the ICD-10 Instruction Manual (2nd Edition, found at http://www.who.int/classifications/icd/ICD-10_2nd_ed_volume2.pdf). While ICD-10 clearly establishes the semantic basis for the dual coding, it does not define an actual literal expression form suitable for use with CWE. In such cases, HL7 defines a suitable literal expression form and assigns an OID to that. The OID for this ICD-10 expression is 2.16.840.1.113883.6.260. The code system specifies that the two ICD-10 codes are separated by a space.

```
|J21.8 B95.6^^^^^^^^Staph aureus bronchiolitis^^^^^2.16.840.1.113883.6.260
```

The ICD-10 code J21.8 is "Acute bronchiolitis due to other specified organisms" and the code B95.6 is "Staphylococcus aureus as the cause of diseases classified to other chapters". No value for the dual coding scheme has been assigned in table 0396, so CWE.3 cannot be populated.

2.C.2   HL7 and User-Defined code Tables

Following are the HL7 and User defined tables extracted from the chapters.

2.C.2.0   0001 - Administrative Sex

Table Metadata

Table	Steward	V3 Harmonization	V3 Equivalent	Where used	Status
0119	OO	TBD	TBD	ORC-1	Active

HL7 Table 0119 - Order Control Codes

Value	Description	Comment
AF	Order/service refill request approval	**Placer Applications.** AF is a response to RF where the placer authorizing a refill or quantity of refills.
CA	Cancel order/service request	**Placer Applications.** A cancellation is a request by the placer for the filler not to do a previously ordered service. Confirmation of the cancellation request is provided by the filler, e.g., a message with an ORC-1-order control value of CR. Typical responses include, but are not limited to, CR – Cancelled as requested, UC – Unable to Cancel.
CH	Child order/service	**Placer or Filler Applications.** Used in conjunction with the PA – Parent order control code. Refer to PA order control code for discussion.
CN	Combined result	**Filler Applications.** The combined result code provides a mechanism to transmit results that are associated with two or more orders. This situation occurs commonly in radiology reports when the radiologist dictates a single report for two or more exams represented as two or more orders. For example, knee and hand films for a rheumatoid arthritis patient might generate a single dictation on the part of the radiologist. When such results are reported the CN code replaces the RE code in all but the last ORC, and the results follow the last ORC and its OBR. An example follows of a single report following three ORCs: MSH|...<cr> PID|...<cr> ORC|CN|...<cr> OBR|1|A4461XA^HIS|81641^RAD|73666^Bilateral Feet|...<cr> ORC|CN|...<cr> OBR|2|A4461XB^HIS|81642^RAD|73642^Bilateral Hand PA|...<cr> ORC|RE|...<cr> OBR|3|A4461XC^HIS|81643^RAD|73916^Bilateral Knees|...<cr> OBX|1|CE|73916&IMP|1|Radiologist's Impression|...<cr> OBX|2|CE|73642&IMP|1|Radiologist's Impression|...<cr> OBX|3|FT|73642&GDT|1|Description|...<cr>
CR	Canceled as requested	**Filler Applications.** A response by the filler application that a request to cancel (CA by the placer application) was performed successfully.

Value	Description	Comment
DC	Discontinue order/service request	**Placer Applications.** A request by the placer application for the filler application to discontinue a previously requested service. The differentiation between discontinue and cancel is that discontinue effects the order/service and all future occurrences, cancel refers to just the present action. Typical responses include, but are not limited to, CR – Cancelled as requested, UC – Unable to Cancel.
DE	Data errors	**Placer or Filler Applications.**
DF	Order/service refill request denied	**Placer Applications.** In response to a Filler application requesting refill authorization (RF), DF indicates that the placer does not authorize refills for the order. ORC-16 Order Control Code reason may be used to indicate the reason for the request denial. Some suggested values include: AA Patient unknown to the provider AB Patient never under provider care AC Patient no longer under provider care AD Patient has requested refill too soon AE Medication never prescribed for the patient AF Patient should contact provider first AG Refill not appropriate Note that these values originate from the NCPDP SCRIPT Response Segment Code List Qualifiers. Materials Reproduced with the consent of ©National Council for Prescription Drug Programs, Inc. 1988, 1992, 2002 NCPDP.
DR	Discontinued as requested	**Filler Applications.** The filler, in response to a request to discontinue (DC from the placer application), has discontinued the order/service.
FU	Order/service refilled, unsolicited	**Filler Applications.** FU notifies the placer that the filler issued a refill for the order at the patient's request.
HD	Hold order request	**Placer Applications.** Typical responses include, but are not limited to, CR – Cancelled as requested, UC – Unable to Cancel.
HR	On hold as requested	**Filler Applications.**
LI	Link order/service to patient care problem or goal	**Placer or Filler Applications.** Refer to Chapter 12 Patient Care for complete discussion.
NA	Number assigned	**Placer Applications.** There are three circumstances that involve requesting an order number (ORC-2-placer order number or ORC-3-filler order number): (1) When the filler application needs to request an ORC-3-filler order number from a centralized application (e.g., HIS). SN – The send order number code provides a mechanism for the filler to request an ORC-3-filler order number from some centralized application (called "other" in the table below), such as a central HIS, by sending an ORM message containing an ORC-1-order control value of SN. This ORC has a null ORC-3-filler order number and an ORC-2-placer order number created by the filler application when the filler originates the order. The order (SN type) message can be acknowledged by either one of two methods: a) By an order application acknowledgement message containing an ORC-1-order control value of OK. Then an unsolicited order message can be sent at a future time, containing an ORC with ORC-1-order control value of NA to provide the actual number assigned. b) By an order acknowledgement message containing an ORC-1-order control value of NA as described below. NA – The number assigned code allows the "other" application to notify the filler application of the newly-assigned filler order number. ORC-1-order control contains

		value of NA, ORC-2-placer order number (from the ORC with the SN value), and the newly-assigned filler order number. _[see table below]_ (2) When the filler application needs to request an ORC-2-placer order number from some other application (e.g., Order Entry). SN - The send order number code provides a mechanism for the filler application to request an ORC-2-placer order number from another application (called "other" in the table below) by sending an order message containing an ORC-1-order control value of SN. This ORC has a null ORC-2-placer order number and an ORC-3-filler order number created by the filler application when the filler originates the order. The order (SN type) message can be acknowledged by two methods: a) By an order application acknowledgement message containing an ORC-1-order control value of OK. Then an unsolicited order message can be sent at a future time, containing an ORC-1-order control value of NA to provide the actual number assigned. b) By an order acknowledgement message containing an ORC-1-order control value of NA as described below. NA – The number assigned code allows the "other" application to notify the filler application of the newly-assigned ORC-2-placer order number. The ORC contains an ORC-1-order control value of NA, the newly-assigned ORC-2-placer order number, and the ORC-3-filler order number (from the ORC with the SN value). _[see table below]_ (3) When an application (not the filler application) wants to assign an ORC-3-filler order number for a new order. NW – When the application creating an order (not the filler application) wants to assign a filler order number for a new order. or RO – (RO following an RP). In this case, the "other" application completes ORC-3-filler order number, using the filler application ID as the second component of the filler order number. _[see table below]_

OC	Order/service canceled	**Filler Applications.**
OD	Order/service discontinued	**Filler Applications.**
OE	Order/service released	**Filler Applications.**
OF	Order/service refilled as requested	**Filler Applications.** OF directly responds to the placer system's request for a refill.
OH	Order/service held	**Filler Applications.**
OK	Order/service accepted & OK	**Filler Applications.** See comments for NA – Number Assigned.
OP	Notification of order for outside dispense	**Placer Applications.** These order control codes are used to communicate an order between systems where the order is intended for informational purposes. For example, an order that will be performed by a vendor outside the enterprise of communicating systems. The communicating systems may need to maintain information relative to the order for clinical continuity, but no actions to perform the ordered service are intended. OP represents an informational version of NW, PY represents the informational-only version of RO. NW and RO table notes also apply to OP and PY, respectively.
OR	Released as requested	**Filler Applications.**
PA	Parent order/service	**Filler Applications.** The parent (PA) and child (CH) order control codes allow the spawning of "child" orders from a "parent" order without changing the parent (original order). One or more ORC segments with an ORC-1-order control value of PA are followed by one or more ORC segments with an ORC-1-order control value of CH. Whether OBR segments must be present is determined by the value of ORC-6-response flag. For example, suppose that a microbiology culture produced two organisms and corresponding susceptibility reports. Then the sequence of segments would be as follows: (see figure 4-4) The assignment of placer order numbers in the parent-child paradigm depends on whether the placer or filler creates the child order and in the latter case, on whether the placer supports the SN/NA transaction. If the placer creates the child orders it will assign their placer order numbers according to its usual procedures. If the filler creates the child orders there are two possibilities: each child will inherit the placer order number of its parent, or the filler will use the SN/NA transaction to request that the placer assign a placer order number. In either case, the filler application creates the filler order numbers of the children according to its usual procedures. Whenever a child order is transmitted in a message the ORC segment's ORC-8-parent is valued with the parent's filler order number (if originating from the filler) and with the parent's placer order number (if originating from the filler or if originating from the placer). The parent-child mechanism can be used to "expand" a parent order (e.g., an order for three EKGs on successive mornings).
PR	Previous Results with new order/service	**Placer Applications.** PR indicates that this ORC is part of an ORU structure containing previous observation, which is embedded in the order. At least two main use cases require that the complete results of the previous observations be transmitted with the order. • Diagnostic laboratories referring tests to another lab for either confirmation of results (HIV, etc.) or due to not being equipped to do the tests (genetic testing, etc.). • Diagnostic laboratories sending test results to Knowledge Bases for the

Value	Description	Comment
		automated generation of diagnostic comments for inclusion into the lab report.
PY	Notification of replacement order for outside dispense	**Placer Applications.** See comments for OP - Notification of order for outside dispense.
RE	Observations/Performed Service to follow	**Placer or Filler Applications.** The observations-to-follow code is used to transmit patient-specific information with an order. An order detail segment (e.g., OBR) can be followed by one or more observation segments (OBX). Any observation that can be transmitted in an ORU message can be transmitted with this mechanism. When results are transmitted with an order, the results should immediately follow the order or orders that they support. The following example shows the sequence of segments for three Pharmacy orders. It illustrates the use of the RE code:

Segment	Order Control	Comment
MSH		
PID		
ORC	NW	First new order
RXO		First order segment
ORC	NW	2nd new order
RXO		2nd order segment
[ORC	RE	Patient-specific observation, optional in V 2.2
OBR]		Observation OBR, optional in V 2.2
OBX		An observation segment
OBX		Another observation segment
OBX		Another observation segment
OBX		Another observation segment
ORC	NW	3rd order
RXO		3rd order segment

Value	Description	Comment
		In this version of HL7, results can be transmitted with an order as one or more OBX segments without the necessity of including the ORC and OBR segments. Observations can be transmitted in an ORU message without using an ORC. There are times when it is necessary to transmit information not included in the OBR segments of the ORU message. In this case, it is recommended that the ORC be included in the ORU message. The order control value of RE is required only in ORM messages to indicate that an order is followed by observation results (OBX). The RE code is not necessary in the ORU message because it is expected that the OBR segments can be followed by observation results (OBX).
RF	Refill order/service request	**Placer or Filler Applications.** RF accommodates requests by either the filler or the placer. The filler may be requesting refill authorization from the placer. A placer system may be requesting a refill to be done by the filler system. Typical responses include, but are not limited to: For a Filler request AF – Order/service refill request approval, DF – Order/service refill request denied; for a Placer request RE - Observations/Performed Service to follow, UF – Unable to refill.
RL	Release previous hold	**Placer Applications.**
RO	Replacement order	**Placer or Filler Applications.** A replacement is the substitution of one or more orders for one or more previously ordered services. The replaced orders are treated as though they were canceled. If and when an

Value	Description	Comment
		ordered service can be replaced are local site-specific determinations.
		Use the parent/child order control codes if the site specifies that the original order must remain intact. Do not use the replacement codes under this circumstance.
		For each order to be replaced, use an ORC-1-order control value of RP (request for a replacement going to a filler) or RU (an unsolicited replacement created by the filler) used by the filler to notify the placer and/or other systems). By local agreement, the ORC segment (with RP or RU) may be followed by its original order detail segment. The ORC segments (with RP or RU) must be followed by an ORC segment with an ORC-1-order control value of RO (indicating the replacement order). By local agreement, the ORC with the RO value may be followed by an order detail segment.
		For example, suppose that an ancillary application were replacing two OBR orders with three different orders. The sequence of segments would be as follows:

Seg	Order Control	Comment
ORC	RU	1st replaced ORC
OBR		1st replaced order's detail segment
ORC	RU	2nd replaced ORC
OBR		2nd replaced order's detail segment
ORC	RO	1st replacement ORC
OBR		1st replacement order's detail segment
ORC	RO	2nd replacement ORC
OBR		2nd replacement order's detail segment
ORC	RO	3rd replacement ORC
OBR		3rd replacement order's detail segment

Whether the OBR segments must be present is determined by the value of ORC-6-response flag.

The described replacement method will handle all possible cases of replacement: one-into-one, many-into-one, one-into-many, and many-into-many. If the placer sent this request to the filler with two RPs, and this was a response back from the filler to the placer, the two RUs (replaced unsolicited) would be two RQs (replaced as requested). (see figure 4-3)

Seg	Order Control	Comment
ORC	RQ	1st replaced ORC
OBR		1st replaced order's detail segment
ORC	RQ	2nd replaced ORC
OBR		2nd replaced order's detail segment

		The replacement order code is sent by the filler application to another application indicating the exact replacement ordered service. It is used with the RP and RU order control codes as described above.
		The rules for the order numbers in ORC segments with an order control value of RO are determined by the replacement type (RP or RU).
		In the case of the RU type (i.e., unsolicited replacement by the filler), the filler order number is generated as usual by the filler application. The placer order number is identical to the placer order number of the first transmitted ORC with an order control value of RU.
		In the case of the RP type (i.e., a replacement request from another application to the filler), the placer order number is generated by the placer application using the procedure for new orders. The filler order number is generated by the filler application using the procedure identical for new orders.
		If a replacement sequence is used in an ORU message (i.e., during results reporting), the following are the recommended segments to be used for the replacement orders:
		ORC with an order control value of RO.
		Any OBR segments (can be replaced by any order detail segments).
		Optionally followed by observation result segments (OBX) NTE segments can appear after the OBR (or any order detail segment) or after an OBX segment as in a regular ORU message.
RP	Order/service replace request	**Placer Applications.** A replacement is the substitution of one or more orders for one or more previously ordered services. See comment 1 on RO – Replacement Order for further discussion. The order replace request code permits the order filler to replace one or more new orders with one or more new orders, at the request of the placer application. The rules for the order numbers in ORC segments with an order control value of RO are determined by the replacement type (RP or RU). In the case of the RU type (i.e., unsolicited replacement by the filler), the filler order number is generated as usual by the filler application. RR	Request received	**Placer or Filler Applications.** Left in for backward compatibility. In the current version it is equivalent to an accept acknowledgment. The request-received code indicates that an order message has been received and will be processed later. The order has not yet undergone the processing that would permit a more exact response.
RU	Replaced unsolicited	**Filler Applications.** A replacement is the substitution of one or more orders for one or more previously ordered services. See comment 1 on RO – Replacement Order for further discussion. The unsolicited replacement code permits the filler application to notify another application without being requested from the placer application. The rules for the order numbers in ORC segments with an order control value of RO are determined by the replacement type (RP or RU). In the case of the RU type (i.e., unsolicited replacement by the filler), the filler order number is generated as usual by the filler application. P	Profile or battery consisting of many independent atomic observations (e.g., SMA12, electrolytes), usually done at one instrument on one specimen	can be associated with one or more OM4 (specimen) segments See comment for value S
F	Functional procedure that may consist of one or more interrelated measures (e.g., glucose tolerance test, creatinine clearance), usually done at different times and/or on different specimens	can be associated with one or more OM4 (specimen) segments See comment for value S
A	Atomic service/test/observation (test code or treatment code)	can be associated with one or more OM4 (specimen) segments a single direct observation and would usually be associated with an OM2 and/or OM3 segments
S	Superset—a set of batteries or procedures ordered under a single code unit but processed as separate batteries (e.g., routines = CBC, UA, electrolytes) This set indicates that the code being described is used to order multiple service/test/observation batteries. For example, a client who routinely orders a CBC, a differential, and a thyroxine as an outpatient profile might use a single, special code to order all three test batteries, instead of having to submit three separate order codes.	can be associated with one or more OM4 (specimen) segments Codes P, F, and S identify sets (batteries) and should be associated with an OM5 segment that defines the list of elements. The definitions for the contained elements would have to be sent in other independent OMx segments, one for each contained element. In the ASTM context, most text reports - such as discharge summaries, admission H&Ps, and chest X-ray reports - are considered as sets, in which each section of the report (e.g., description, impression, and recommendation of an X-ray report) is considered a separate observation
C	Single observation calculated via a rule or formula from other independent observations (e.g., Alveolar—arterial ratio, cardiac output)	can be associated with one or more OM4 (specimen) segments a derived quantity and would usually be associated with an OM6 segment

BI	Billing Address	May also be used for the validation/authorization of credit cards
N	Birth (nee) (birth address, not otherwise specified)	Refers to the birth address, not otherwise specified
BDL	Birth delivery location	Refers to the address where birth occurred.

Value	Description	Comment
	(address where birth occurred)	
F	Country Of Origin	
C	Current Or Temporary	Retained for backward compatibility only as of v2.6. Refer to XAD.16
B	Firm/Business	Refers to an address specific to an organization, such as an insurance company or employer, versus an individual's work location or place of employment. It would be specific to a firm or organization that has some sort of business relationship with the subject
H	Home	Refers to a residence or domicile, literally the place where the subject resides the majority of the time. Generally speaking most people will have a home address and it will represent their primary address. Home address is mutually exclusive of permanent address.
L	Legal Address	Refers to a special case address specific to the status of a subject or legal action involving the subject. For example, prisoners being treated at a healthcare facility may have home addresses, but their status mandates an address specific to their place of incarceration. Statutes may require the health information specific to a ward of the state be sent to a legal guardian, the courts, or a state or municipal agency regardless of the ward's physical location. In cases involving civil or criminal proceedings, a record may be flagged such that all correspondence is sent to any variety of legal entities.
M	Mailing	Retained for backward compatibility only as of v2.6. Refer to XAD.18
O	Office/Business	Refers to a work address specific to the subject.
P	Permanent	Refers to a place where the residents know the subject and where correspondence addressed to the subject will eventually reach the subject regardless of their physical location. A permanent address generally reflects a tax jurisdiction. Members of the military, flight attendants, and executives on rotational assignments are examples of those who typically maintain a permanent address. Although mutually exclusive of home address, in some instances, such as the executives mentioned above, it may be synonymous. In such cases upon return from assignment this address would revert to the home address.
RH	Registry home. Refers to the information system, typically managed by a public health agency, that stores patient information such as immunization histories or cancer data, regardless of where the patient obtains services.	Refers to the information system, typically managed by a public health agency that stores patient information such as immunization histories or cancer data, regardless of where the patient obtains services
BR	Residence at birth (home address at time of birth)	Refers to the home address at time of birth.
S	Service Location	Refers to the location in which service is rendered. This would be used if reimbursement is based on the location of the service (to take into account the cost of those services).
SH	Shipping Address	
TM	Tube Address	Pneumatic tube address (to which letters may be sent). A special transport system to transport small samples/containers and/or normal mail in small carriages on rail or in a tube. (German Rohrpost)
V	Vacation

D	Customary Name	Known as/conventional/the one you use	1
L	Official Registry Name	The formal name as registered in an official (government) registry, but which name might not be commonly used. May correspond to legal name For many people, customary name is also their official name	1
TEMP	Temporary Name	A temporary name. Note that a name valid time can provide more detailed information.	1
NB	Newborn Name	A name assigned on a temporary basis at birth. i.e. "Baby of Smith"	2
A	Assigned	A name assigned to a person. Reasons some organizations assign alternate names may include not knowing the person's name, or to maintain anonymity. Some, but not necessarily all, of the name types that people call "alias" may fit into this category.	1
S	Pseudonym	Coded Pseudo-Name to ensure anonymity	2
T	Indigenous/Tribal	Indigenous/Tribal/Community Name e.g. Chief Red Cloud	2
K	Business name	A name used in a Professional or Business context. Also includes writer's pseudonym, artist's name, stage name, street name, etc	2

Value	Description	Comment	Level
		An example of use is where a person with multiple proper names (i.e. married) uses one of the particular names in a professional	
I	Licensing Name		2
N	Nickname	Nickname /"Call me" Name/Street Name	2
REL	Religious	e.g. Sister Mary Francis, Brother John	2
R	Registered Name	(animals only) ***Retained for backwards compatibility only as of v2.7***. Use "L" instead - has same meaning	1
B	Birth name	A name that a person had shortly after being born. Usually for family names but may be used to mark given names at birth that may have changed later. This is not for temporary names assigned at birth while a newborn is not yet named	1
M	Maiden Name	A name you had just before you got married	2
C	Adopted Name	A name acquired by adoption	1
MSK	Masked	There is information on this item available but it has not been provided by the sender due to security, privacy or other reasons. There may be an alternate mechanism for gaining access to this information. Note: using this null flavor does provide information that may be a breach of confidentiality, even though no detail data is provided. Its primary purpose is for those circumstances where it is necessary to inform the receiver that the information does exist without providing any detail.	1
NAV	Temporarily Unavailable	Information is not available at this time but it is expected that it will be available later. Includes John or Jane Doe situations	1
P	Name of Partner/Spouse	***Retained for backward compatibility only as of v2.7.***	1
U	Unknown	Unknown	1
BAD	Bad Name	A name that was wrongly used in the past and is now maintained only for the purposes of searching	1
NOUSE	No Longer To Be Used	Name not to be used anymore for personal reasons	1

Note: The content of Legal Name is country specific. In the US the legal name is the same as the current married name.

0203	InM	TBD	TBD	**CX.5**, PPN.13, XCN.13, XON.7	Active

HL7 Table 0203 - Identifier Type

Value	Description	Comment
ACSN	Accession ID	Accession Identifier
AM	American Express	Deprecated and replaced by BC in v 2.5.
AMA	American Medical Association Number	A physician identifier assigned by the AMA.
AN	Account number	An identifier that is unique to an account.
ANON	Anonymous identifier	An identifier for a living subject whose real identity is protected or suppressed Justification: For public health reporting purposes, anonymous identifiers are occasionally used for protecting patient identity in reporting certain results. For instance, a state health department may choose to use a scheme for generating an anonymous identifier for reporting a patient that has had a positive human immunodeficiency virus antibody test. Anonymous identifiers can be used in PID 3 by replacing the medical record number or other non-anonymous identifier. The assigning authority for an anonymous identifier would be the state/local health department.

Value	Description	Comment
ANC	Account number Creditor	Class: Financial A more precise definition of an account number: sometimes two distinct account numbers must be transmitted in the same message, one as the creditor, the other as the debitor. Kreditorenkontonummer
AND	Account number debitor	Class: Financial A more precise definition of an account number: sometimes two distinct account numbers must be transmitted in the same message, one as the creditor, the other as the debitor. Debitorenkontonummer
ANT	Temporary Account Number	Class: Financial Temporary version of an Account Number. Use Case: An ancillary system that does not normally assign account numbers is the first time to register a patient. This ancillary system will generate a temporary account number that will only be used until an official account number is assigned.
APRN	Advanced Practice Registered Nurse number	An identifier that is unique to an advanced practice registered nurse within the jurisdiction of a certifying board
ASID	Ancestor Specimen ID	A unique identifier for the ancestor specimen. All child, grandchild, etc. specimens of the ancestor specimen share the same Ancestor Specimen ID.
BA	Bank Account Number	Class: Financial
BC	Bank Card Number	Class: Financial An identifier that is unique to a person's bank card. Replaces AM, DI, DS, MS, and VS beginning in v 2.5.
BCT	Birth Certificate	A number associated with a document identifying the event of a person's birth.
BR	Birth registry number	An identifier unique within the Assigning Authority that is the official legal record of a person's birth.
BRN	Breed Registry Number	
BSNR	Primary physician office number	Betriebsstättennummer - for use in the German realm.
CC	Cost Center number	Class: Financial Use Case: needed especially for transmitting information about invoices.
CONM	Change of Name Document	A number associated with a document identifying a person's legal change of name.
CZ	Citizenship Card	A number assigned by a person's country of residence to identify a person's citizenship.
CY	County number	
DDS	Dentist license number	An identifier that is unique to a dentist within the jurisdiction of the licensing board
DEA	Drug Enforcement Administration registration number	An identifier for an individual or organization relative to controlled substance regulation and transactions. Use case: This is a registration number that identifies an individual or organization relative to controlled substance regulation and transactions. A DEA number has a very precise and widely accepted meaning within the United States. Surprisingly, the US Drug Enforcement Administration does not solely assign DEA numbers in the United States. Hospitals have the authority to issue DEA numbers to their medical residents. These DEA numbers are based upon the hospital's DEA number, but the authority rests with the hospital on the assignment to the residents. Thus, DEA as an Identifier Type is necessary in addition to DEA as an Assigning Authority.
DI	Diner's Club card	Deprecated and replaced by BC in v 2.5.
DFN	Drug Furnishing or prescriptive authority Number	An identifier issued to a health care provider authorizing the person to write drug orders Use Case: A nurse practitioner has authorization to furnish or prescribe pharmaceutical substances; this identifier is in component 1.
DL	Driver's license number	
DN	Doctor number	
DO	Osteopathic License number	An identifier that is unique to an osteopath within the jurisdiction of a licensing board.
DP	Diplomatic Passport	A number assigned to a diplomatic passport.

Value	Description	Comment
DPM	Podiatrist license number	An identifier that is unique to a podiatrist within the jurisdiction of the licensing board.
DR	Donor Registration Number	
DS	Discover Card	Deprecated and replaced by BC in v 2.5.
EI	Employee number	A number that uniquely identifies an employee to an employer.
EN	Employer number	
ESN	Staff Enterprise Number	An identifier that is unique to a staff member within an enterprise (as identified by the Assigning Authority).
FI	Facility ID	
GI	Guarantor internal identifier	Class: Financial
GL	General ledger number	Class: Financial
GN	Guarantor external identifier	Class: Financial
HC	Health Card Number	
JHN	Jurisdictional health number (Canada)	Class: Insurance 2 uses: a) UK jurisdictional CHI number; b) Canadian provincial health card number:
IND	Indigenous/Aboriginal	A number assigned to a member of an indigenous or aboriginal group outside of Canada.
LACSN	Laboratory Accession ID	A laboratory accession id is used in the laboratory domain. The concept of accession is used in other domains such as radiology, so the LACSN is used to distinguish a lab accession id from an radiology accession id
LANR	Lifelong physician number	Lebenslange Arztnummer - for use in German realm.
LI	Labor and industries number	
LN	License number	
LR	Local Registry ID	
MA	Patient Medicaid number	Class: Insurance
MB	Member Number	An identifier for the insured of an insurance policy (this insured always has a subscriber), usually assigned by the insurance carrier. Use Case: Person is covered by an insurance policy. This person may or may not be the subscriber of the policy.
MC	Patient's Medicare number	Class: Insurance
MCD	Practitioner Medicaid number	Class: Insurance
MCN	Microchip Number	
MCR	Practitioner Medicare number	Class: Insurance
MCT	Marriage Certificate	A number associated with a document identifying the event of a person's marriage.
MD	Medical License number	An identifier that is unique to a medical doctor within the jurisdiction of a licensing board. Use Case: These license numbers are sometimes used as identifiers. In some states, the same authority issues all three identifiers, e.g., medical, osteopathic, and physician assistant licenses all issued by one state medical board. For this case, the CX data type requires distinct identifier types to accurately interpret component 1. Additionally, the distinction among these license types is critical in most health care settings (this is not to convey full licensing information, which requires a segment to support all related attributes).
MI	Military ID number	A number assigned to an individual who has had military duty, but is not currently on active duty. The number is assigned by the DOD or Veterans' Affairs (VA).
MR	Medical record number	An identifier that is unique to a patient within a set of medical records, not necessarily unique within an application.
MRT	Temporary Medical Record Number	Temporary version of a Medical Record Number Use Case: An ancillary system that does not normally assign medical record numbers is the first time to register a patient. This ancillary system will generate a temporary medical record number that will only be used until an official medical record number is assigned.
MS	MasterCard	Deprecated and replaced by BC in v 2.5.
NBSNR	Secondary physician office number	Nebenbetriebsstättennummer - for use in the German realm.
NCT	Naturalization Certificate	A number associated with a document identifying a person's retention of citizenship in a particular country.

Value	Description	Comment

Value	Description	Comment
ASCII	The printable 7-bit ASCII character set.	(This is the default if this field is omitted)
8859/1	The printable characters from the ISO 8859/1 Character set	
8859/2	The printable characters from the ISO 8859/2 Character set	
8859/3	The printable characters from the ISO 8859/3 Character set

8859/7	The printable characters from the ISO 8859/7 Character set	
8859/8	The printable characters from the ISO 8859/8 Character set	
8859/9	The printable characters from the ISO 8859/9 Character set	
8859/15	The printable characters from the ISO 8859/15 (Latin-15)	
ISO IR6	ASCII graphic character set consisting of 94 characters.	http://www.itscj.ipsj.or.jp/ISO-IR/006.pdf
ISO IR14	Code for Information Exchange (one byte)(JIS X 0201-1976).	Note that the code contains a space, i.e., "ISO IR14".
ISO IR87	Code for the Japanese Graphic Character set for information interchange (JIS X 0208-1990),	Note that the code contains a space, i.e., "ISO IR87". The JIS X 0208 needs an escape sequence. In Japan, the escape technique is ISO 2022. From basic ASCII, escape sequence "escape" $ B (in HEX, 1B 24 42) lets the parser know that following bytes should be handled 2-byte wise. Back to ASCII is 1B 28 42.
ISO IR159	Code of the supplementary Japanese Graphic Character set for information interchange (JIS X 0212-1990).	Note that the code contains a space, i.e., "ISO IR159".
GB 18030-2000	Code for Chinese Character Set (GB 18030-2000)	Does not need an escape sequence.
KS X 1001	Code for Korean Character Set (KS X 1001)	
CNS 11643-1992	Code for Taiwanese Character Set (CNS 11643-1992)	Does not need an escape sequence.

Value	Description	Comment
BIG-5	Code for Taiwanese Character Set (BIG-5)	Does not need an escape sequence. BIG-5 does **not** need an escape sequence. ASCII is a 7 bit character set, which means that the top bit of the byte is "0". The parser knows that when the top bit of the byte is "0", the character set is ASCII. When it is "1", the following bytes should be handled as 2 bytes (or more). No escape technique is needed. However, since some servers do not correctly interpret when they receive a top bit "1", it is advised, in internet RFC, to **not** use these kind of non-safe non-escape extension.
UNICODE	The world wide character standard from ISO/IEC 10646-1-1993[1]	Deprecated. Retained for backward compatibility only as v 2.5. Replaced by specific Unicode encoding codes.
UNICODE UTF-8	UCS Transformation Format, 8-bit form	UTF-8 is a variable-length encoding, each code value is represented by 1,2 or 3 bytes, depending on the code value. 7 bit ASCII is a proper subset of UTF-8. Note that the code contains a space before UTF but not before and after the hyphen.
UNICODE UTF-16	UCS Transformation Format, 16-bit form	UTF-16 is identical to ISO/IEC 10646 UCS-2. Note that the code contains a space before UTF but not before and after the hyphen.
UNICODE UTF-32	UCS Transformation Format, 32-bit form	UTF-32 is defined by Unicode Technical Report #19, and is an officially recognized encoding as of Unicode Version 3.1. UTF-32 is a proper subset of ISO/IEC 10646 UCS-4. Note that the code contains a space before UTF but not before and after the hyphen.

Value	Description	Comment
DNS	An Internet host name, in accordance with RFC 1035; or an IP address. Either in ASCII or as integers, with periods between components ("dotted" notation).	
EUI64	IEEE 64-bit Extended Unique Identifier is comprised of a 24-bit company identifier and a 40-bit instance identifier. The value shall be formatted as 16 ASCII HEX digits, for example, "AABBCC1122334455". The 24-bit company identifier, formally known as Organizationally Unique Identifier (OUI-24), is guaranteed to be globally unique. The 40-bit extensions are assigned by manufacturers. This identifier is often used in equipment interfaces (e.g., "MAC" address format for IPv4 & IPv6). [See http://standards.ieee.org/regauth/oui/tutorials/EUI64.html for a detailed explanation of the format.]	OUI-24 values are administered by the IEEE Registration Authority.
CLIA	Clinical Laboratory Improvement Amendments. Allows for the ability to designate organization identifier as a "CLIA" assigned number (for labs)	
CLIP	Clinical laboratory Improvement Program. Allows for the ability to designate organization identifier as a "CLIP" assigned number (for labs). Used by US Department of Defense.	
GUID	Same as UUID.	Retained for backward compatibility only as of v2.7; use UUID instead
HCD	The CEN Healthcare Coding Scheme Designator	Retained for backward compatibility only as of v2.7; does not identify Assigning Authorities
HL7	HL7 registration schemes	Retained for backward compatibility only as of v2.7; HL7 assigns ISO OIDs for Assigning Authorities
ISO	An International Standards Organization Object Identifier (OID), in accordance with ISO/IEC 8824. Formatted as decimal digits separated by periods; recommended limit of 64 characters	
L,M,N	Locally defined coding entity identifier.	
Random	Usually a base64 encoded string of random bits. Note: Random IDs are typically used for instance identifiers, rather than an identifier of an Assigning Authority that issues instance identifiers	Retained for backward compatibility only as of v2.7; equivalent to a locally defined entity identifier scheme; use L. M, or N instead.
URI	Uniform Resource Identifier	

Value	Description	Comment
UUID	The DCE Universal Unique Identifier, in accordance with RFC 4122. Recommended format is 32 hexadecimal digits separated by hyphens, in the digit grouping 8-4-4-4-12	
x400	An X.400 MHS identifier. Recommended format is in accordance with RFC 1649	
x500	An X.500 directory name	

Note: X400, X500, and DNS are not technically universally valid for all time. Names can be de-registered from an existing user and registered to a new user.

2.C.2.176   0355 – Primary Key Value Type

Table Metadata

Table	Steward	V3 Harmonization	V3 Equivalent	Where used	Status
0355	InM	TBD	TBD	MFE.5	Active

HL7 Table 0355 – Primary Key Value Type

Value	Description	Comment
PL	Person location	
CE	Coded element	Withdrawn as of v2.6 – CE has been replaced by CNE and CWE
CWE	Coded with Exceptions	

Note: This table contains data types for MFE-4 values present in HL7 defined master files. As HL7 adopts a new master file that contains a data type for MFE-4 not defined in Table 0355, the data type will be added to Table 0355. For locally defined master files, this table can be locally extended with other HL7 data types as defined in section 2.6.6. The maximum data set is theoretically equal to the number of HL7 data types.

2.C.2.177   0356 – Alternate Character Set Handling Scheme

Table Metadata

Table	Steward	V3 Harmonization	V3 Equivalent	Where used	Status
0356	InM	TBD	TBD	MSH-20	Active

HL7 Table 0356 – Alternate Character Set Handling Scheme

Value	Description	Comment
ISO 2022-1994	This standard is titled "Information Technology – Character Code Structure and Extension Technique". .	This standard specifies an escape sequence from basic one byte character set to specified other character set, and vice versa. The escape sequence explicitly specifies what alternate character set to be evoked. Note that in this mode, the actual ASCII escape character is used as defined in the referenced ISO document. As noted in 1.7.1, escape sequences to/from alternate character set should occur within HL7 delimiters. In other words, HL7 delimiters are basic one byte characters only, and just before and just after delimiters, character encoding status should be the basic one byte set.
2.3	The character set switching mode specified in HL7 2.5, section 2.7.2 and section 2.A.46, "XPN – extended person name".	Note that the escape sequences used in this mode do not use the ASCII "esc" character, as defined in ISO 2022-1994. They are "HL7 escape sequences" as first defined in HL7 2.3, sec. 2.9.2. (Also, note that sections 2.8.28.6.1and 2.9.2 in HL7 2.3 correspond to sections 2.16.93 and 2.7.2 in HL7 2. 5.)

Value	Description	Comment
<null>	This is the default, indicating that there is no character set switching occurring in this message.	This is the default.

2.C.2.178   0357 – Message Error Condition Codes

Table Metadata

Table	Steward	V3 Harmonization	V3 Equivalent	Where used	Status
0357	InM	TBD	TBD	**ERR-4**,	Active

HL7 Table 0357 – Message Error Condition Codes

Value	Description	Comment
0	Message accepted	Success. Optional, as the AA conveys success. Used for systems that must always return a status code.
100	Segment sequence error	Error: The message segments were not in the proper order, or required segments are missing.
101	Required field missing	Error: A required field is missing from a segment
102	Data type error	Error: The field contained data of the wrong data type, e.g., an NM field contained "FOO".
103	Table value not found	Error: A field of data type ID or IS was compared against the corresponding table, and no match was found.
104	Value too long	Error: a value exceeded the normative length, or the length that the application is able to safely handle.
200	Unsupported message type	Rejection: The Message Type is not supported.
201	Unsupported event code	Rejection: The Event Code is not supported.
202	Unsupported processing id	Rejection: The Processing ID is not supported.
203	Unsupported version id	Rejection: The Version ID is not supported.
204	Unknown key identifier	Rejection: The ID of the patient, order, etc., was not found. Used for transactions *other than* additions, e.g., transfer of a non-existent patient.
205	Duplicate key identifier	Rejection: The ID of the patient, order, etc., already exists. Used in response to addition transactions (Admit, New Order, etc.).
206	Application record locked	Rejection: The transaction could not be performed at the application storage level, e.g., database locked.
207	Application internal error	Rejection: A catchall for internal errors not explicitly covered by other codes.

2   The HCPCS code is divided into three "levels." Level I includes the entire CPT-4 code by reference. Level II includes the American Dental Association's Current Dental Terminology (CDT-2) code by reference. Level II also includes the genuine HCPCS codes, approved and maintained jointly by the Alpha-Numeric Editorial Panel, consisting of CMS, the Health Insurance Association of America, and the Blue Cross and Blue Shield Association. Level III are codes developed locally by Medicare carriers. The HCPCS modifiers are divided into the same three levels, I being CPT-4 modifiers, II CDT-2 and genuine HCPCS modifiers, and III being locally agreed modifiers.

The genuine HCPCS codes and modifiers of level II can be found at http://www.cms.hhs.gov/MedHCPCSGenInfo/. CMS distributes the HCPCS codes via the National Technical Information Service (NTIS, www.ntis.gov) and NTIS distribution includes the CDT-2 part of HCPCS Level II, but does not include the CPT-4 part (Level I). CMS may distribute the CPT-4 part to its contractors.

ICDO2	International Classification of Disease for Oncology Second Edition	Percy C, VanHolten V, and Muir C, editors. International Classification of Diseases for Oncology. Second Edition. Geneva: World Health Organization; 1990. The ICD-9 neoplasm structure did not include morphology and there was a growing interest by physicians to establish a coding system for morphology. ICD-O is used in cancer registries (and other related areas) for coding the topography (site) and morphology of a neoplasm. The topography code uses similar categories as ICD-10 for malignant neoplasms allowing greater specificity for the site of non-malignant neoplasms than in ICD-10. The topography code consists of an alphabetic character (the letter C) followed by two numeric digits, a decimal point, and a numeric digit. The morphology code consists of a 6-digit numeric code which consists of three parts: histologic type (4-digit), behavior code (1-digit), and grading or differentiation (1-digit). ICD-O-2 is used for tumors diagnosed prior to 2001.	Specific Non-Drug Code	New

ISO3166_1	ISO 3166-1 Country Codes	International Standards Organization standard 3166 contains 3 parts. Part 1 contains three tables for codes for countries of the world. These are 2-character alphabetic, 3-character alphabetic, and numeric codes.	Demographics	New
ISO3166_2	ISO 3166-2 Country subdivisions	International Standards Organization standard 3166 contains 3 parts. Part 2 contains a complete breakdown into a relevant level of administrative subdivisions of all countries listed in ISO 3166-1. The code elements used consist of the alpha-2 code element from ISO 3166-1 followed by a separator and a further string of up to three alphanumeric characters e. g. DK-025 for the Danish county Roskilde.	Demographics	New
ISO4217	ISO4217 Currency Codes	ISO's currency codes, which are based on the ISO country codes are published in the standard ISO 4217:2008 Codes for the representation of currencies and funds. This International Standard specifies the structure for a three-letter alphabetic code and an equivalent three-digit numeric code for the representation of currencies and funds. For those currencies having minor units, it also shows the decimal relationship between such units and the currency itself.	Financial	New
ISO639	ISO 639 Language	International Standards Organization codes for the representation of names of languages. ISO 639 provides two sets of language codes, one as a two-character code set (639-1) and another as a three-character code set (639-2) for the representation of names of languages. ISO 639-3, Codes for the representation of names of languages - Part 3: Alpha-3 code for comprehensive coverage of languages, is a code list that aims to define three-letter identifiers for all known human languages. RXNORM	RxNorm	RxNorm provides standard names for clinical drugs (active ingredient + strength + dose form) and for dose forms as administered to a patient. It provides links from clinical drugs, both branded and generic, to their active ingredients, drug components (active ingredient + strength), and related brand names. NDCs (National Drug Codes) for specific drug products (where there are often many NDC codes for a single product) are linked to that product in RxNorm. RxNorm links its names to many of the drug vocabularies commonly used in pharmacy management and drug interaction software, including those of First Databank, Micromedex, MediSpan, and Multum. By providing links between these vocabularies, RxNorm can mediate messages between systems not using the same software and vocabulary.RxNorm is one of a suite of designated standards for use in U.S. Federal Government systems for the electronic exchange of clinical health information. Table Metadata

Table	Steward	V3 Harmonization	V3 Equivalent	Where used	Status
0472	OO	TBD	TBD	TQ1-12	Active

HL7 Table 0472 - TQ Conjunction ID

Value	Description	Comment
S	Synchronous	Do the next specification after this one (unless otherwise constrained by the following fields: *TQ1-7-start date/time* and *TQ1-8-end date/time*). An "S" specification implies that the second timing sequence follows the first, e.g., when a service request is written to measure blood pressure Q15 minutes for the 1st hour, then every 2 hours for the next day.
A	Asynchronous	Do the next specification in parallel with this one (unless otherwise constrained by the following fields: *TQ1-7-start date/time* and *TQ1-8-end date/time*). The conjunction of "A" specifies two parallel instructions, as are sometimes used in medication, e.g., prednisone given at 1 tab on Monday, Wednesday, Friday, and at 1/2 tab on Tuesday, Thursday, Saturday, Sunday.
C	Actuation Time	It will be followed by a completion time for the service. This code allows one to distinguish between the time and priority at which a service should be actuated (e.g., blood should be drawn) and the time and priority at which a service should be completed (e.g., results should be reported).

User-defined Table 0489 - Risk Codes

Code	Description	Comment/Usage Note/Definition
BIO	Biological	The dangers associated with normal biological materials. I.e. potential risk of unknown infections. Routine biological materials from living subjects.
COR	Corrosive	Material is corrosive and may cause severe injury to skin, mucous membranes and eyes. Avoid any unprotected contact.
ESC	Escape Risk	The entity is at risk for escaping from containment or control.
AGG	Aggressive	A danger that can be associated with certain living subjects, including humans.
IFL	MaterialDangerInflammable	Material is highly inflammable and in certain mixtures (with air) may lead to explosions. Keep away from fire, sparks and excessive heat.
EXP	Explosive	Material is an explosive mixture. Keep away from fire, sparks, and heat.
INF	MaterialDangerInfectious	Material known to be infectious with human pathogenic microorganisms. Those who handle this material must take precautions for their protection.
BHZ	Biohazard	Material contains microorganisms that are an environmental hazard. Must be handled with special care.
INJ	Injury Hazard	Material is solid and sharp (e.g., cannulas.) Dispose in hard container.
POI	Poison	Material is poisonous to humans and/or animals. Special care must be taken to avoid incorporation, even of small amounts.
RAD	Radioactive	Material is a source for ionizing radiation and must be handled with special care to avoid injury of those who handle it and to avoid environmental hazards.

C	Cyclical	Used for indicating a repeating cycle of service requests; for example, individual intravenous solutions used in a cyclical sequence (a.k.a. "Alternating IVs"). This value would be compatible with linking separate service requests or with having all cyclical service request components in a single service request. Likewise, the value would be compatible with either Parent-Child messages or a single service request message to communicate the service requests' sequencing

Value	Description	Comment

N	Nurse prerogative	Where a set of two or more orders exist and the Nurse, or other caregiver, has the prerogative to choose which order will be administered at a particular point in time. For example,
		    Milk of Magnesia PO 30 ml qhs (at bedtime)
		    Dulcolax Supp R @ hs prn
		    Colace 100 mg capsule PO bid
		The nurse would be administering MOM, but may add the Colace and may also give the Dulcolax Supp as needed to promote and maintain regularity.

C	Compound	A **compound** is an extempo order which may be made up of multiple drugs. For example, many hospitals have a standard item called "Magic Mouthwash". The item is ordered that way by the physician. The extempo items will contain multiple products, such as Maalox, Benadryl, Xylocaine, etc. They will all be mixed together and will be dispensed in a single container.

T	Tapering	A tapering order is one in which the same drug is used, but it has a declining dosage over a number of days.
		For example, Decadron 0.5 mg is often ordered this way. The order would look like this:
		    Decadron 0.5 mg qid (four times a day) for 2 days, then
		    Decadron 0.5 mg tid (three times a day) for 2 days, then
		    Decadron 0.5 mg bid (twice a day) for 2 days, then
		    Decadron 0.5 mg qd (daily) for 2 days, then stop.

E	Exclusive	An **exclusive** order is an order where only one of the multiple items should be administered at any one dosage time. The nurse may chose between the alternatives, but should only give ONE of them. An example would be: Phenergan 25 mg PO, IM or R q6h prn (orally, intramuscularly, or rectally every 6 hours as needed).
S	Simultaneous	A **simultaneous** order is 2 or more drugs which are ordered to be given at the same time. A common example of this would be Demerol and Phenergan (Phenergan is given with the Demerol to control the nausea that Demerol can cause). The order could be: Demerol 50 mg IM with Phenergan 25 mg IM q4h prn (every 4 hours as needed).

0530	InM	TBD	TBD	**CX.10**, PPN.24, XCN.23	Active

User-defined Table 0530 - Organization, Agency, Department

Value	Description	Comment
AE	American Express	
DEA	Drug Enforcement Agency	The US Drug Enforcement Administration does not solely assign DEA numbers in the United States. Hospitals have the authority to issue DEA numbers to their medical residents. These DEA numbers are based upon the hospital's DEA number, but the authority rests with the hospital on the assignment to the residents. Thus, DEA as an Assigning Authority is necessary in addition to DEA as an Identifier Type.
DOD	Department of Defense	In some countries e.g., the US, more than one department may issue a military identifier. Hence, US is not sufficient as the Assigning Authority.
MC	Master Card	
VA	Veterans Affairs	
VI	Visa

Table Metadata

Table	Steward	V3 Harmonization	V3 Equivalent	Where used	Status
0532	InM	TBD	TBD	Numerous locations	Active

This table expands on the original Yes/no indicator table by including "flavors of null". It is intended to be applied to fields where the response is not limited to "yes" or "no".

Use Case: A reporting facility/person has little or no information on a particular event or outcome and these are reported as unknown for public health reporting purposes.

HL7 Table 0532 - Expanded Yes/no Indicator

Value	Description	Comment
Y	Yes	
N	No	
NI	No Information	No information whatsoever can be inferred from this exceptional value. This is the most general exceptional value. It is also the default exceptional value
NA	not applicable	No proper value is applicable in this context (e.g., last menstrual period for a male)
UNK	unknown	A proper value is applicable, but not known
NASK	not asked	This information has not been sought (e.g., patient was not asked
ASKU	asked but unknown	Information was sought but not found (e.g., patient was asked but didn't know
NAV	temporarily unavailable	Information is not available at this time but it is expected that it will be available later
NP	not present	Obsolete as of v2.7.

HL7 Table 0617 - Address Usage

Value	Description	Comment
M	Mailing	Identifies an address for mail correspondence from a healthcare provider as stipulated by the subject. For example, under the tenets of certain privacy regulations, it is exclusive to the patient and is typically maintained at the encounter or visit level versus the person level as it only has relevance to the specifics of a given encounter. This is an exception category of address in that the patient has stipulated that they want all correspondence relevant to a given encounter sent to this address in lieu of any other address on file. Providers are required to accommodate such requests under HIPAA promulgated regulation. Note that mailing and legal address may be mutually exclusive as defined below. (Implementors are reminded that although the privacy regulation requires the provider to honor such requests, it does require the provider to enquire whether the patient has a preferred address other than the one volunteered.)
V	Visit	Identifies an address at which the individual is physically located and may be visited.
C	Classification	Identifies an address used for the purpose of demographic classification or searching. Such addresses frequently contain insufficient information to be used as mailing or visit addresses. For example, they may only indicate country and postal code, without providing a street address.

	service	
CSR	Contact recipient for scheduling – Filler should contact the service recipient (target) to schedule the service	
EL	Elective – Beneficial to the patient but not essential for survival.	
EM	Emergency – An unforeseen combination of circumstances or the resulting state that calls for immediate action	
P	Preop – Used to indicate that a service is to be performed prior to a scheduled surgery. When ordering a service and using the pre-op priority, a check is done to see the amount of time that must be allowed for performance of the service. When the order is placed, a message can be generated indicating the time needed for the service so that it is not ordered in conflict with a scheduled operation.	
PRN	As needed – An "as needed" order should be accompanied by a description of what constitutes a need. This description is represented by an observation service predicate as a precondition.	
R	Routine – Routine service, do at usual work hours	
RR	Rush reporting – A report should be prepared and sent as quickly as possible	
S	Stat – With highest priority (e.g. emergency).	
T	Timing critical – It is critical to come as close as possible to the requested time (e.g. for a through antimicrobial level).	
UD	Use as directed – Drug is to be used as directed by the prescriber.	
UR	Urgent – Calls for prompt action

Table Metadata

Table	Steward	V3 Harmonization	V3 Equivalent	Where used	Status
0907	OO	TBD	TBD	SHP-7	Active

HL7 Table 0907 - Confidentiality

Value	Description	Comment
B	Business – Since the service class can represent knowledge structures that may be considered a trade or business secret, there is sometimes (though rarely) the need to flag those items as of business level confidentiality. However, no patient related information may ever be of this confidentiality level.	
D	Clinician – Only clinicians may see this item, billing and administration persons can not access this item without special permission.	
I	Individual – Access only to individual persons who are mentioned explicitly as actors of this service and whose actor type warrants that access (cf. to actor typed code).	
L	Low – No patient record item can be of low confidentiality. However, some service objects are not patient related and therefore may have low confidentiality.	
N	Normal – Normal confidentiality rules (according to good health care practice) apply, that is, only authorized individuals with a legitimate medical or business need may access this item.	
R	Restricted – Restricted access, e.g. only to providers having a current care relationship to the patient.	
V	Very restricted – Very restricted access as declared by the Privacy Officer of the record holder.	
ETH	Substance abuse related – Alcohol/drug-abuse related item	
HIV	HIV Related – HIV and AIDS related item	
PSY	Psychiatry related – Psychiatry related item	
SDV	Sexual and domestic violence related – Sexual assault / domestic violence related item	

Value	Description	Comment
C	Celebrity – Celebrities are people of public interest (VIP) including employees, whose information require special protection.	
S	Sensitive – Information for which the patient seeks heightened confidentiality. Sensitive information is not to be shared with family members. Information reported by the patient about family members is sensitive by default. Flag can be set or cleared on patient's request.	
T	Taboo – Information not to be disclosed or discussed with patient except through physician assigned to patient in this case. This is usually a temporary constraint only; example use is a new fatal diagnosis or finding, such as malignancy or HIV.
